STORAGE CONDITIONS

Store away from humidity.

Agronomic interests

ROLE OF NUTRIENT(S)

Supply combined with Nitrogen, Phosphorus Potassium, Magnesium and Trace elements essential to the good progress of the crop. The proportion of each element is specific to the needs of the plant then allowing an improvement of the overall nutritional status of the plant.

PRODUCT SPECIFICATIONS

KIWIFRUIT Complex supplies a balanced blend of nutrients which leaf analysis has shown to be commonly deficient or below optimum in the growing

The fully soluble ingredients in KIWIFRUIT Complex are readily absorbed by the foliage and will provide a rapid boost to thses essential

The rigorous selection of the raw materials guarantees it to be 100% soluble in the treatment

FEATURES AND BENEFITS OF THE FORMULATION

The unique formulation of this product quarantees maximum foliar uptake, without the risk of phytotoxicity, designed to achieve nutrient absorption in less than

This product is formulated with rigorously selected raw materials, guaranteed by quality control, to ensure a perfect safety of use and to optimize the absorption through the leaves.

Directions of use

CROP RECOMMENDATIONS

KIWIFRUIT: 5 kg per hectare per application. For best results apply in at least 200 litres of water per hectare. Do not use less than 200 litres per hectare if applied in combination with other products.

> Timing:

Apply regularly, as required, up to six times per year, starting as soon as there is sufficient foliage to absorb the spray. A core program of at least 3 treatments would be:

- 1st application during spring canopy development before flowering
- 2nd application after pollination at beginning of fruit set
- 3rd application 21 days after the 2nd application

Non cropping, establishing young orchards: apply as required ensuring at least three applications during the growing season.

Instructions for use

For best results, use sufficient water to achieve an even crop coverage to the point of run-

Avoid spraying in very strong sunlight and/or very high temperatures. If possible, apply during evening or early morning especially if day-time temperatures exceed 28°C. Very young foliage and crops under stress may be more susceptible to scorch. Lower doses should be applied in these circumstances and the application interval reduced accordingly. Refer to the Crop Recommendations table for application rates and timings for individual crops.

Precautions

- In Fill the spray tank with half the required amount of water and start agitation.

 1. Fill the spray tank with half the required amount of KIWIFRUIT Complex and then add the rest of the water, maintaining agitation continuously. When combining with other components in a tank-mix, always add KIWIFRUIT Complex first. Do not allow the mixture to stand without agitation.

 3. After spraying, clean and rinse the spraying equipment thoroughly.

IMPORTANT: respect the uses, doses, conditions and instructions for use mentioned on the packaging, which are determined according to the characteristics of the product and the applications for which it is recommended. On this basis, conduct the crop and treatments according to the best agricultural practices taking into account, under your responsibility, all the specific factors concerning your farm, such as soil characteristics, weather conditions, cropping methods, cultivars and this specific resistances. AGRONUTRITION guarantees the quality its products only in their initial packaging over the period indicated on the manufacturer's certificates. They guarantee their conformity to the composition indicated on the packaging and to the regulations currently in force. Precautionary measure brochures are available on request.
